Provide a brief explanation why any checked services were not included in the Assessment:

Part 2b. Description of Role with Payment Cards (ROC Sections 2.1 and 3.1)

Describe how the business stores, processes, and/or transmits account data.

Wazuh provides a cloud-based platform in which agents installed on various systems on premises and cloud based devices for their clients' report usage statistics, logs, and perform vulnerability scanning of system components back to the central cloud hub.

Wazuh offers a payment page with integrated I-Frame for customers to pay for their Wazuh services. At no time during this interaction does Wazuh process, transmit, or store PAN. This is outsourced to an Iframe.

Describe how the business is otherwise involved in or has the ability to impact the security of its customers' account data.

Wazuh does not directly handle credit card data within their cloud-based logging aggregation system. However, it is possible for clients to leak credit card data into Wazuh systems in the logs which they aggregate. The log aggregation system is not purposed for storage, transmission or processing of credit card data.

Wazuh accepts credit cards for payment of their cloud services via Stripe iFrame integration.

Describe system components that could impact the security of account data.

Wazuh's infrastructure could impact the security of account data by the data entered into the iFrame solution for payment of the solution. Additionally log aggregation of a client may affect the security of account data if Wazuh is being used for the central log repository of the client.

Part 2. Executive Summary (continued)

Part 2c. Description of Payment Card Environment

Provide a high-level description of the environment covered by this Assessment.

For example:

- *Connections into and out of the cardholder data environment (CDE).*
- *Critical system components within the CDE, such as POI devices, databases, web servers, etc., and any other necessary payment components, as applicable.*
- *System components that could impact the security of account data.*

The assessor observed connections in and out of the Wazuh Cloud environment, data-flows from Wazuh agents, firewalls, access control mechanisms, and system settings. In addition, the assessor observed trial, retail, development, and administrative environments for the Wazuh cloud services.

Indicate whether the environment includes segmentation to reduce the scope of the Assessment.
(Refer to the "Segmentation" section of PCI DSS for guidance on segmentation)

Yes No

Part 2d. In-Scope Locations/Facilities (ROC Section 4.6)

List all types of physical locations/facilities (for example, corporate offices, data centers, call centers and mail rooms) in scope for this Assessment.
