# From manual work to automation. Alignet and Wazuh join forces to enhance productivity

Alignet

About Alignet

Alignet specializes in technological solutions and cutting-edge products. They focus their extensive experience on providing innovative solutions for the growing E-commerce market, and pioneered the launch of EMV 3D Secure-based authentication solutions to support programs like Verified by Visa and MasterCard Identity Check (MasterCard SecureCode).

Currently, ALIGNET is considered a leading provider of solutions and products for major banks in Latin America.

Cybersecurity approach

Alignet partnered with Wazuh in July 2019. Their main objective was to achieve their PCI DSS compliance needs to ensure alliances with partners like Visa International and Master-Card Global, and become one of the best, safest, and most innovative Payment Providers in Latin America.

With the leadership of Jorge Temoche, the Chief Information Security Officer at Alignet, and the company's commitment to constant innovation, Alignet aimed to surpass basic compliance, pursuing a more complete and efficient use of Wazuh to take advantage of all their valuable capabilities and work on some opportunities of improvement in the Security Department.

Event correlation and real-time visualization of alerts, ensuring that the information is refined and useful for decision-making, the setup and customization of dashboards for easy access to information. They are currently focused on PCI DSS compliance and the automation of alerts and responses. These efforts aim to minimize manual work and allow a focus on strategic matters.
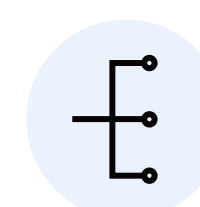

Jorge Temoche
Chief Information
Security Officer
Alignet

"Thanks to the excellent support, even if a person doesn t know much about Wazuh, they will be able to achieve their objectives because the support team will back them up whenever needed."

Alignet

Why Wazuh

Customer Support

For Alignet, this is the main differentiator. Wazuh's Customer Support focuses on guiding and working hand in hand with the customers to make sure all their needs and issues are resolved. Our team addresses all inquiries, ranging from implementation guidance and configuration to general questions, ensuring each is resolved promptly and thoroughly.

Technical capabilities and integrations

Wazuh offers many capabilities that, when properly set up, are game changers for companies across all sectors. Additionally, the flexibility of integrating with different types of software makes Wazuh very practical and allows it to evolve over time.

Cost effective

Being an open source solution, Wazuh doesn't charge for licenses. This makes Wazuh very competitive compared to other cybersecurity providers. Customers have access to all features, with any costs associated with additional support, professional services for specific projects, and training for the software.

Achievements and work in progress

1

Time reduction in post-incident inspections from 1 day to 2 hours.

2

Reduced from 8 hours a week to 2 hours a week the detection of threats and vulnerabilities with the custom dashboards.

3

Reduced time spent in manual log search with automation of incident response and real-time alerts.

About Wazuh

Wazuh is a free and open-source security platform that unifies XDR and SIEM capabilities. It protects workloads across on-premises, virtualized, containerized, and cloud-based environments.

With over 20 million downloads per year, Wazuh has one of the largest open-source security communities in the world. From small businesses to large enterprises, the Wazuh solution is used to collect, aggregate, index, and analyze security data, helping organizations detect intrusions, threats, and behavioral anomalies.
